TERMITE

Termite Termination

Termites cause damage worth billions of ruppees each year. Besides the monetary aspect, thousands of winged termites emerging inside one's home are an emotionally trying experience - not to mention the thought of termites silently feasting on one's largest investment.

Termiticides are used to combat the problem. There are combinations of methods depending on what sort of damage is done by the termites. We also have the unique **Termite Tubing System** which is a permanent method of this system has to be implemented at the time of construction for the effective and permanent solution.

The Termite Advantage

Customized solutions
Research based technology upgradation
Long lasting effectiveness
Professional approach to services

Termite Terminates

Wood | Paper | Books | Insulation | Swimming pool liners
Filtration systems | Living trees and shrubs

COCKROACH

Cockroach Approach

Food or filth, everywhere they walk! Cockroaches are the worst of the pests not only because they do not differentiate between food and filth. Their stinking bodies causes unpleasant odour and they leave dark stains on the surfaces they frequent. Diseases like dysentery, diarrhoea, salmonellosis (food poisoning), typhoid, poliomyelitis and gastroenteritis are caused by cockroaches. Allergens like asthma are also linked to cockroach menace.

Benefits

Cost Effective and Proven Solutions
No Harmful Fumes or Lingering Smell
Clean and Non-messy Approach

Cockroach Treatment

Research indicates that cockroaches can survive even the nuclear disaster! No wonder, their extermination requires special treatment methods. An active ingredient in a Gel form is used to seal cockroach hideouts. Spray treatment is also used to debug the whole house.

RODENT

Rodent Management

Mouse or mice, you need not think twice! What makes the problem worst is that it is hard to catch them and the old methods of rats traps are no longer singularly effective. We use a combination of baiting, trapping and proofing methods because there is no single answer to rodent control. Line of control using Blue boards is an effective method depending on level of infestation.

Features and Benefits

- Advanced Rodent Management System
- Pre Loaded Benefits Before Rodent Infestation
- Total and Effective Control
- No Maintenance Required
- Long Term Solution

BEDBUGS

Bedbugs Control

Microscopic dust mites are everywhere in the home - in our beds, clothing, furniture, book shelves and stuffed animals. For people with allergies or asthma, dust mites are a problem. Bedbugs are pest that thrive around human bedding. They live on human blood for survival. They have received their name from its close association with human bedding. They generally hide in the seam of the mattress and in the cracks of the bed and feed on the bed's occupants at night. If the population of bed bugs is very large it spreads in the entire house. The bedbugs may also hide in other pieces of furniture and cracks and clothing of travelers and visitors, bedding material and furniture.

Tips for Control

The treatment is done by spraying insecticide, especially in the seams of mattresses, beds and all other places infested by bedbugs. The bedbugs die on contact with the insecticide. It takes about 1/2 hour to treat a house of about 750 sq.ft. As the eggs of bedbugs are resistant to chemicals, this treatment is repeated within a fortnight to treat the hatchlings.

FOGGING

Fogging Service

we provide highly effective Fogging Services to solve your mosquito problem. We do a through inspection in and around the area to determine presence of mosquitoes and our experts treat those areas with the use of environmentally friendly chemicals and innovative tools. This creates a protective and effective barrier against the pesky insects. Our Fogging Services offer a low-volume mosquito fogging to control & kill the mosquitoes and other small flying insects.

We feel proud to introduce ourselves as the service provider of premium quality range of Fogging Insect Control Services. The entire insect control services are rendered by our competent professionals by spreading fog that immediately interrupts the pheromones of flying insects. Our offered insects control services are accredited for their non allergic nature & cost effectiveness.

WHY PEST CONTROL MATTERS

GPCS delivers reliable and professional pest management solutions that protect health, preserve property, and ensure hygienic environments across residential, commercial, and industrial sectors.

1 Hospitals & Healthcare Facilities

Hospitals & Healthcare Facilities : Maintain a sterile, pest-free environment to protect patients, prevent infections, and ensure compliance with healthcare hygiene standards.

2 Factories & Manufacturing Plants

Factories & Manufacturing Plants: Prevent contamination, safeguard equipment, and maintain product quality with reliable pest management that supports operational efficiency and regulatory compliance.

3 Corporate Spaces & Office Buildings

Corporate Offices: Maintain a hygienic, pest-free workspace that protects employee well-being, safeguards office assets, and preserves your company's professional reputation.

THE COMMERCIAL STANDARD: INTEGRATED PEST MANAGEMENT (IPM)

Because chemical spraying can be dangerous in hospitals and food factories, modern commercial spaces use Integrated Pest Management (IPM).

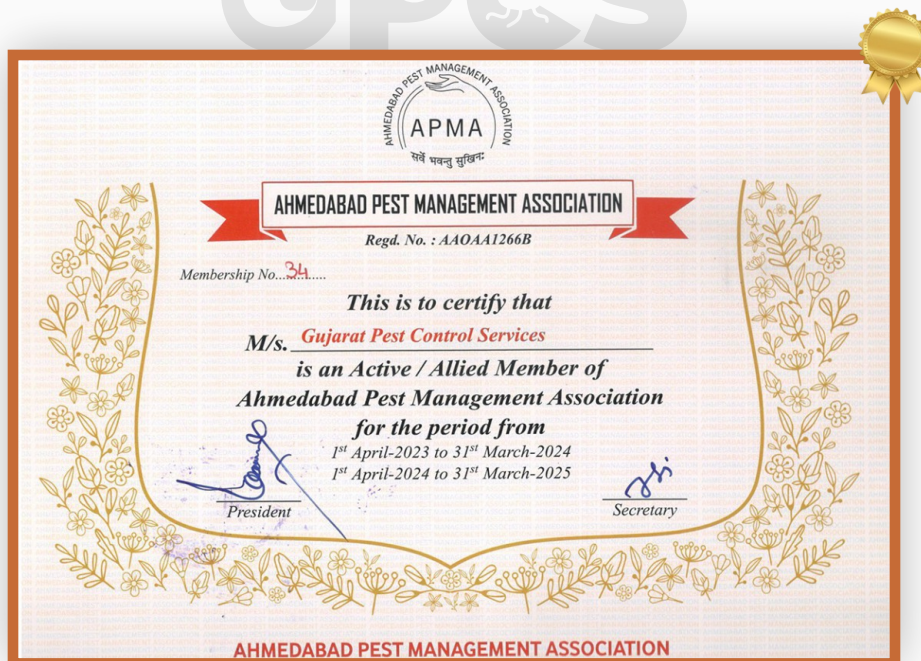

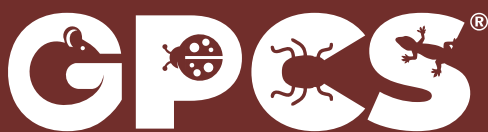

Sector	Primary Threat	Key IPM Strategy
Hospitals	Pathogen spread, sterile contamination	Non-chemical traps, strict exclusion (sealing entry points), and continuous monitoring.
Factories	Product contamination, wire damage	Heavy structural sealing, pheromone traps, and strict waste management protocols.
Corporate	IT infrastructure damage, employee allergies	Routine sanitation inspections, breakroom rules, and targeted baiting away from staff
